

CAVIES and REPRODUCTION

- Female baby cavies are capable of conceiving at a very early age. four weeks old is quite normal.
- A sow will come on heat every 15 to 17 days throughout her life.
- The gestation period is 63 to 72 days.
- She then comes into heat about 2 hours after her babies are born.
- Babies are born with a full coat and able to run around soon after birth
